

**HANDSAIL**  
1.75 SQUARE METERS

**TYPICAL WINDSURFER**  
6.0 SQUARE METERS

Compared to the size of a windsurfing sail the handsail is rather petite, which, by the way is the reason it's so easy to handle. The small size of the handsail makes it a little underpowered, So waiting for the right conditions may be frustrating. Often times the wind isn't strong enough to take you anywhere, and then sometimes it's too windy and dangerous to be out in. However when the conditions are good it's totally fun. To be gliding across the ice on wind power is one of the world's most pleasurable things to do, it really is. If you do any outside ice skating in the winter, you can probably imagine how much more fun you will have with the handsail.
