

SKATE WITH THE WIND

THE BEST HAND HELD SAIL FOR ICE SKATING EVER MADE

Out of the art studio of Tom Kazary came a skater's dream partner, a hand held sail. Designed in 2012. The sail has proven to be durable, well designed, and really, really fun. The balance, weight, and proportions are perfect, making it easy to control while skating. The luff curve and broad seam create a foil shape giving it maximum power as well as an elegant look. Holding on to the comfort grip boom in a breeze can make skating a dreamlike experience, or when windy, a truly exhilarating thing to do. These sails are amazingly fun to use. There is an interaction with the wind that is inherently entertaining. Millions of hockey players and figure skaters already have the skills to get out there and have a wonderful time. It's quite the attention getter and everyone that sees it wants to try it, and everyone who tries it wants to have one. This is a formula for exponential growth. Tom is looking for investors as well as someone with business skills to partner with him in a risky but super cool start up business venture. This skating accessory could potentially become very popular. There has got to be a way to start and run a company that can make, promote, and sell this unique item, and go from a small investment locally to mega millions worldwide.

- high quality dacron sail cloth
- 6063 tubular aluminum frame
- comfort grip foam boom
- clear view window
- easy to assemble
- deluxe carrying bag
- light weight only 3.8 lbs.
- 1.75 sq. meters
- lots of fun

INVESTORS AND PARTNERSHIPS WANTED

TOM KAZARY

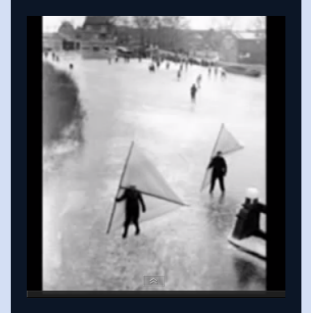

ARE YOU READY TO INVEST OR PARTNER WITH ME,
TOM KAZARY?

I'm thinking of starting a company, to make, promote, and sell an incredible ice skating accessory called the "handsail". Which is a small sail to be held on to while skating. I see an efficient factory workshop making a single product, with an extraordinary office managing social media, and the business of running the company. This is sure be an interesting and rewarding venture.

contact me at handsails@gmail.com

Skating with a sail has been around for a long time. Different designs and materials have been used over the years with different degrees of functionality. The handsail design is amazing. It's ergonomically perfect, and comfortable to hold. It makes use of high tech, modern sail making materials and techniques. It's light and small, weighs only 3.8 lbs. with an 8ft mast a 4ft boom. Which makes it easier to handle and less cumbersome than a larger heavier sail. It's 1.75 sq. meters of sail gives you plenty of pull in light wind to have a wonderful time. The foam comfort grip on the boom gives you a great connection with the sail and the wind that's powering it. Other features include Dacron sail cloth with a clear view mono film window, 6063 aluminum frame, fiber glass battens, safety rubber end caps, and a choice of 6 binding trim colors. It also comes apart and fits nicely into a deluxe carrying bag. These design features make it clearly "the best hand held sail for ice skating ever made."

HANDSAILS CONCEPTS
